

# MAG Converter

JRE 1.8 required

<http://www.oracle.com/technetwork/java/javase/downloads/jre8-downloads-2133155.html>

The screenshot shows a Java Swing window titled "MAG Converter". The window has a standard title bar with minimize, maximize, and close buttons. The main content area is light gray and contains three elements: a text label "Portal URL:" followed by a red "1." and an empty text input field; a text label "MAC:" followed by a red "2." and an empty text input field; and a blue "GO" button followed by a red "3.". Below the input fields is a large, empty white rectangular area.

1. Enter the Provider Portal URL here. Example «`http://server.link:8080/c/`»
2. Enter here the MAC address of the device. Example «`00:1A:79:00:00:00`»
3. Click on the GO button

If this device is registered with your provider, you will get the username and password as output.
